

NAME

chmod – change mode of file

SYNOPSIS

(chmod = 15.)

sys chmod; name; mode

chmod(name, mode)

char *name;

DESCRIPTION

The file whose name is given as the null-terminated string pointed to by *name* has its mode changed to *mode*. Modes are constructed by ORing together some combination of the following:

- 4000 set user ID on execution
- 2000 set group ID on execution
- 0400 read by owner
- 0200 write by owner
- 0100 execute by owner
- 0070 read, write, execute by group
- 0007 read, write, execute by others

Only the owner of a file (or the super-user) may change the mode.

SEE ALSO

chmod(I)

DIAGNOSTIC

Error bit (c-bit) set if *name* cannot be found or if current user is neither the owner of the file nor the super-user. From C, a -1 returned value indicates an error, 0 indicates success.
