

NAME

getgid – get group identification

SYNOPSIS

(getgid = 47.; not in assembler)

sys getgid

getgid()

DESCRIPTION

Getgid returns the real group ID of the current process. The real group ID identifies the group of the person who is logged in, in contradistinction to the effective group ID, which determines his access permission at the moment. It is thus useful to programs which operate using the “set group ID” mode, to find out who invoked them.

SEE ALSO

setgid(II)
