

**NAME**

**pr** - print file

**SYNOPSIS**

**pr** [ **-h** name ] [ **-n** ] [ **+n** ] [ file ... ]

**DESCRIPTION**

*Pr* produces a printed listing of one or more files. The output is separated into pages headed by a date, the name of the file or a header (if any), and the page number. If there are no file arguments, *pr* prints the standard input file, and is thus usable as a filter.

Options apply to all following files but may be reset between files:

**-n** produce *n*-column output

**+n** begin printing with page *n*.

**-h** treat the next argument as a header

If there is a header in force, it is printed in place of the file name. Interconsole messages via *write*(1) are forbidden during a *pr*.

**FILES**

/dev/tty? to suspend messages.

**SEE ALSO**

*cat*(1), *cp*(1)

**DIAGNOSTICS**

none (files not found are ignored)

**BUGS**

It would be nice to be able to set the number of lines per page.
