

**NAME**

umount – dismount file system

**SYNOPSIS**

*/etc/umount* special

**DESCRIPTION**

*Umount* announces to the system that the removable file system previously mounted on special file *special* is to be removed.

**SEE ALSO**

mount (VIII)

**DIAGNOSTICS**

It complains if the special file is not mounted or if it is busy. The file system is busy if there is an open file on it or if someone has his current directory there.

**BUGS**
