

NAME

gtty – get typewriter status

SYNOPSIS

(gtty = 32.)

(file descriptor in r0)

sys gtty; arg

... arg: .=.+6

gtty(fildes, arg)

int arg[3];

DESCRIPTION

Gtty stores in the three words addressed by *arg* the status of the typewriter whose file descriptor is given in r0 (resp. given as the first argument). The format is the same as that passed by *stty*.

SEE ALSO

stty(II)

DIAGNOSTICS

Error bit (c-bit) is set if the file descriptor does not refer to a typewriter. From C, a -1 value is returned for an error, 0, for a successful call.
