

NAME

proof – compare two text files

SYNOPSIS

proof oldfile newfile

DESCRIPTION

Proof lists those lines of *newfile* that differ from corresponding lines in *oldfile*. The line number in *newfile* is given. When changes, insertions or deletions have been made the program attempts to resynchronize the text in the two files by finding a sequence of lines in both files that again agree.

SEE ALSO

cmp(I), comm(I)

DIAGNOSTICS

yes, but they are undecipherable, e.g. ‘?1’.

BUGS

This program has a long way to go before even a list of specific bugs is appropriate.
