

NAME

`glob` – generate command arguments

SYNOPSIS

`/etc/glob` command [arguments]

DESCRIPTION

Glob is used to expand arguments to the shell containing “*”, “[”, or “?”. It is passed the argument list containing the metacharacters; *glob* expands the list and calls the indicated command. The actions of *glob* are detailed in the Shell writeup.

SEE

sh(I)

BUGS

Glob gives the “No match” diagnostic only if no arguments at all result. This is never the case if there is any argument without a metacharacter.
