

NAME

`ttyn` – return name of current typewriter

SYNOPSIS

`jsr` **`pc,ttyn`**
`ttyn(file)`

DESCRIPTION

Ttyn hunts up the last character of the name of the typewriter which is the standard input (from *as*) or is specified by the argument *file* descriptor (from C). If *n* is returned, the typewriter name is then “/dev/*ttyn*”.

x is returned if the indicated file does not correspond to a typewriter.
