

NAME

prof – display profile data

SYNOPSIS

prof [**-v**] [**-a**] [**-l**] [file]

DESCRIPTION

Prof will read the file mon.out produced by the monitor subroutine. Under default modes, the namelist in the object file (a.out default) is read and correlated to the mon.out profile. The percentage of time spent between adjacent valued external symbols is printed in decreasing order. If the **-a** option is used, all symbols are used rather than just external symbols. If the option **-l** is used, the output is listed by symbol value rather than decreasing percentage. If the **-v** option is used, all printing is suppressed and a profile plot is produced on /dev/vt0.

FILES

mon.out for profile
a.out for namelist
/dev/vt0 for plotting
