

**NAME**

dn – dn11 ACU interface

**DESCRIPTION**

The *dn?* files are write-only. The permissible codes are:

0-9 dial 0-9  
: dial \*  
; dial #  
= end-of-number

The entire telephone number must be presented in a single *write* system call.

It is recommended that an end-of-number code be given even though only one of the ACU's (113C) actually requires it.

**FILES**

/dev/dn0 connected to 801 with dp0  
/dev/dn1 connected to 113C with ttyc  
/dev/dn2 not currently connected

**SEE ALSO**

dp(IV), dc(IV), write(II)

**BUGS**

It needs a delay character to handle second dial tone.
