

NAME

forml _ form letter generator processor

SYNOPSIS

forml [name] ...

DESCRIPTION

A streamlined program for typing form letters. The names pick out prestored form letters prepared according to the conventions of *form* and *roff*. The program prompts to get each blank filled in. When all the forms are completed, it prompts "Set paper." It waits for a newline before printing each letter.

If more than one name is given, the name of each letter is announced before the prompts for it begin. If no names are given, the program asks "Which letter?" before each. Respond with the name and a newline, or newline only when done.

On a 2741 type terminal, the program assumes the letter is to be typed with a correspondence ball, and also prompts "Change ball." Replace the ball at the end.
