

NAME

mount – mount file system

SYNOPSIS

/etc/mount special file

DESCRIPTION

Mount announces to the system that a removable file system is present on the device corresponding to special file *special* (which must refer to a disk or possibly DECTape). The *file* must exist already; it becomes the name of the root of the newly mounted file system.

SEE ALSO

umount (VIII)

BUGS

Mounting file systems full of garbage can crash the system.
