

NAME

boot – reboot UNIX

SYNOPSIS

sys boot / boot = 39. not in assembler

DESCRIPTION

UNIX will clean up outstanding I/O, and then execute the reboot read-only program. This call is restricted to the super-user. All users will be logged out.

SEE ALSO

boot procedures (VII)

DIAGNOSTICS

the c-bit is set if you are not the super-user

BUGS

It often doesn't work (for unknown reasons).
It depends on switch settings.
