

NAME

kill – do in an unwanted process

SYNOPSIS

kill processid ...

DESCRIPTION

Kills the specified processes. The processid of each asynchronous process started with ‘&’ is reported by the shell. Processid’s can also be found by using *ps* (1).

The killed process must have been started from the same typewriter as the current user, unless he is the superuser.

SEE ALSO

ps(1), *sh*(1)

BUGS

Clearly people should only be allowed to kill processes owned by them, and having the same typewriter is neither necessary nor sufficient.
