

NAME

`pr` - print file

SYNOPSIS

`pr` [`-h` name] [`-n`] [`+n`] [file ...]

DESCRIPTION

Pr produces a printed listing of one or more files. The output is separated into pages headed by a date, the name of the file or a header (if any), and the page number. If there are no file arguments, *pr* prints the standard input file, and is thus usable as a filter.

Options apply to all following files but may be reset between files:

`-n` produce *n*-column output

`+n` begin printing with page *n*.

`-h` treat the next argument as a header

If there is a header in force, it is printed in place of the file name. Interconsole messages via `write(I)` are forbidden during a *pr*.

FILES

`/dev/tty?` to suspend messages.

SEE ALSO

`cat(I)`, `cp(I)`

DIAGNOSTICS

none (files not found are ignored)

BUGS

It would be nice to be able to set the number of lines per page.
