

**NAME**

proof – compare two text files

**SYNOPSIS**

**proof** oldfile newfile

**DESCRIPTION**

*Proof* lists those lines of *newfile* that differ from corresponding lines in *oldfile*. The line number in *newfile* is given. When changes, insertions or deletions have been made the program attempts to resynchronize the text in the two files by finding a sequence of lines in both files that again agree.

**SEE ALSO**

cmp(I), comm(I)

**DIAGNOSTICS**

yes, but they are undecipherable, e.g. '?1'.

**BUGS**

This program has a long way to go before even a list of specific bugs is appropriate.
