

**NAME**

type – type on 2741

**SYNOPSIS**

**type** file ...

**DESCRIPTION**

*Type* copies its input files to the fixed output port **ttyc** converting to 2741 EBCDIC output code. Before each new page (66 lines) and before each new file, *type* stops and reads the 2741 before continuing. This allows time for insertion of single sheet paper. To continue, push the ATTN key on the 2741.

**FILES**

/dev/ttyc

**BUGS**

Since it is impossible to second guess a 2741, quite often it is necessary to print a # to put this device in a state it might already be in.

The value of padding out a page with up to 66 carriage returns is doubtful.
