

**NAME**

gtty – get typewriter status

**SYNOPSIS**

(gtty = 32.)

(file descriptor in r0)

**sys gtty; arg**

**... arg: .=.+6**

**gtty(fildes, arg)**

**int arg[3];**

**DESCRIPTION**

*Gtty* stores in the three words addressed by *arg* the status of the typewriter whose file descriptor is given in r0 (resp. given as the first argument). The format is the same as that passed by *stty*.

**SEE ALSO**

stty(II)

**DIAGNOSTICS**

Error bit (c-bit) is set if the file descriptor does not refer to a typewriter. From C, a -1 value is returned for an error, 0, for a successful call.
