

**NAME**

setfil – specify Fortran file name

**SYNOPSIS**

**call setfil** ( unit, hollerith-string )

**DESCRIPTION**

*Setfil* provides a primitive way to associate an integer I/O *unit* number with a file named by the *hollerith-string*. The end of the file name is indicated by a blank. Subsequent I/O on this unit number will refer to file whose name is specified by the string.

*Setfil* should be called only before any I/O has been done on the *unit*, or just after doing a **rewind** or **endfile**. It is ineffective for unit numbers 5 and 6.

**SEE ALSO**

fc (I)

**BUGS**

There is still no way to receive a file name or other argument from the command line. Also, the exclusion of units 5 and 6 is unwarranted.
