

**NAME**

`ttyn` – return name of current typewriter

**SYNOPSIS**

**jsr**     **pc,ttyn**  
**ttyn(file)**

**DESCRIPTION**

*Ttyn* hunts up the last character of the name of the typewriter which is the standard input (from *as*) or is specified by the argument *file* descriptor (from C). If *n* is returned, the typewriter name is then `"/dev/ttyn"`.

**x** is returned if the indicated file does not correspond to a typewriter.

**BUGS**
