DESCRIPTION

Tmg produces a translator for the language whose parsing and translation rules are described in file name.t. The new translator appears in a.out and may be used thus:

a.out input [output]

Except in rare cases input must be a randomly addressable file. If no output file is specified, the standard output file is assumed.

DIAGNOSTICS

Syntactic errors result in "???" followed by the offending line.

Situations such as space overflow with which the Tmg processor or a Tmg-produced processor can not cope result in a descriptive comment and a dump.
