

NAME

`ttyn` – return name of current typewriter

SYNOPSIS

jsr **pc,ttyn**
ttyn(file)

DESCRIPTION

Ttyn hunts up the last character of the name of the typewriter which is the standard input (from *as*) or is specified by the argument *file* descriptor (from C). If *n* is returned, the typewriter name is then `"/dev/ttyn"`.

x is returned if the indicated file does not correspond to a typewriter.
