NAME

graf − draw graph on GSI terminal

SYNOPSIS

graf | nroff | gsi

DESCRIPTION

Graf is a preprocessor to *nroff* (q.v.) for producing plots imbedded in documents. The standard input is copied to the standard output except for plots, which are inserted whenever a line beginning ''.GR'' is found. The remainder of the line should be the arguments to *plog,* normally including a ''<file'' to point off to the data for the graph. *Graf* itself reads its standard input.

Graf and *neqn* can be used together:

neqn files | graf | nroff | gsi

produces a memo with figures and equations and text all intermixed. There is no typesetter equivalent of *graf,* nor are there any plans for one.

SEE ALSO

plog (VI), neqn (I), nroff (I), gsi (VI)

BUGS

Same as *plog* (VI). Axes and labels are not scaled down correctly for smaller graphs. It should recognize .so commands.
