

**NAME**

neqn – typeset mathematics on terminal

**SYNOPSIS**

**neqn** [ file ] ...

**DESCRIPTION**

*Neqn* is an *nroff* (I) preprocessor. The input language is the same as that of *eqn* (I). Normal usage is almost always

neqn file ... | nroff

Output is meant for terminals with forward and reverse capabilities, such as the Model 37 teletype or GSI terminal.

If no arguments are specified, *neqn* reads the standard input, so it may be used as a filter.

**SEE ALSO**

*eqn* (I), *gsi* (VI)

**BUGS**

Because of some interactions with *nroff* there may not always be enough space left before and after lines containing equations.
