NAME
         newgrp – log in to a new group

SYNOPSIS
         newgrp group

DESCRIPTION
         Newgrp changes the group identification of its caller, analogously to *login.* The same person re-
         mains logged in, and the current directory is unchanged, but calculations of access permissions
         to files are performed with respect to the new group ID.

         A password is demanded if the group has a password and the user himself does not.

         When most users log in, they are members of the group named 'other.'

FILES
         /etc/group, /etc/passwd

SEE ALSO
         login (I), group (V)
