-

NAME
        nice – run a command at low priority

SYNOPSIS
        nice [−*number*] command [arguments]

DESCRIPTION
        Nice executes *command* with low scheduling priority. If a numerical argument is given, that priority (in the range 1-20) is used; if not, priority 4 is used.

        The super-user may run commands with priority higher than normal by using a negative priority, e.g. '−−10'.

SEE ALSO
        nohup (I), nice (II)
