NAME

prof – display profile data

SYNOPSIS

## DESCRIPTION

*Prof* interprets the file *mon.out* produced by the *monitor* subroutine. Under default modes, the symbol table in the named object file (*a.out* default) is read and correlated with the *mon.out* profile file. For each external symbol, the percentage of time spent executing between that symbol and the next is printed (in decreasing order), together with the number of times that routine was called and the number of milliseconds per call.

If the  $-\mathbf{a}$  option is used, all symbols are reported rather than just external symbols. If the  $-\mathbf{l}$  option is used, the output is listed by symbol value rather than decreasing percentage. If the  $-\mathbf{v}$  option is used, all printing is suppressed and a profile plot is produced on the 611 display.

In order for the number of calls to a routine to be tallied, the  $-\mathbf{p}$  option of cc must have been given when the file containing the routine was compiled. This option also arranges for the mon.out file to be produced automatically.

**FILES** 

mon.out for profile a.out for namelist /dev/vt0 for plotting
