

NAME

`gtty` – get typewriter status

SYNOPSIS

(`gtty = 32.`)

(file descriptor in `r0`)

sys `gtty`; `arg`

...

`arg`: `.=.+6`

`gtty`(`fildes`, `arg`)

int `arg`[3];

DESCRIPTION

Gtty stores in the three words addressed by *arg* the status of the typewriter whose file descriptor is given in `r0` (resp. given as the first argument). The format is the same as that passed by *stty*.

SEE ALSO

`stty` (II)

DIAGNOSTICS

Error bit (c-bit) is set if the file descriptor does not refer to a typewriter. From C, a `-1` value is returned for an error, `0`, for a successful call.
