

NAME

seek – move read/write pointer

SYNOPSIS

(seek = 19.)

(file descriptor in *r0*)

sys seek; offset; ptrname

seek(*fildes*, *offset*, *ptrname*)

DESCRIPTION

The file descriptor refers to a file open for reading or writing. The read (resp. write) pointer for the file is set as follows:

if *ptrname* is 0, the pointer is set to *offset*.

if *ptrname* is 1, the pointer is set to its current location plus *offset*.

if *ptrname* is 2, the pointer is set to the size of the file plus *offset*.

if *ptrname* is 3, 4 or 5, the meaning is as above for 0, 1 and 2 except that the offset is multiplied by 512.

If *ptrname* is 0 or 3, *offset* is unsigned, otherwise it is signed.

SEE ALSO

open (II), creat (II)

DIAGNOSTICS

The error bit (c-bit) is set for an undefined file descriptor. From C, a -1 return indicates an error.
