

NAME

`atoi` – convert ASCII to integer

SYNOPSIS

```
atoi(nptr)  
char *nptr;
```

DESCRIPTION

Atoi converts the string pointed to by *nptr* to an integer. The string can contain leading blanks or tabs, an optional ‘-’, and then an unbroken string of digits. Conversion stops at the first non-digit.

SEE ALSO

`atof` (III)

BUGS

There is no provision for overflow.
